

STRUCTURED FISCHER-TROPSCH CATALYST SYSTEM  
AND METHOD

ABSTRACT OF THE DISCLOSURE

5 A Fischer-Tropsch catalyst for the conversion of  
synthesis gas into Fischer-Tropsch products includes a  
stationary Fischer-Tropsch catalyst having a voidage  
ratio greater than approximately 0.45 or 0.6 and may  
further have a catalyst concentration for a given  
reactor volume of at least 10 percent. A Fischer-  
Tropsch catalyst has a structured shape promoting non-  
Taylor flow and/or producing a productivity in the  
10 range of 200 - 4000 vol CO/vol. Catalyst/hour or  
greater over at least a 600 hour run of a Fischer-  
Tropsch reactor with the catalyst therein. A system  
for converting synthesis gas into longer-chain  
hydrocarbon products through the Fisher-Tropsch  
15 reaction has a reactor for receiving synthesis gas  
directly or as a saturated hydrocarbon liquid or a  
combination, and a stationary, structured Fischer-  
Tropsch catalyst disposed within the reactor for  
converting at least a portion of the synthesis gas into  
20 longer-chain hydrocarbons through Fischer-Tropsch  
reaction. A Fischer-Tropsch reactor system having a  
structured Fischer-Tropsch catalyst may have an all-  
liquid saturated reactant feed, an all gas reactant  
feed, or a plethora of combinations therebetween. The  
25 systems may or may not include heat removal devices.  
Methods of manufacturing catalysts and converting  
synthesis gas are also presented.
